

Get out of the office – and take it with you

In today's business world, mobility is a key ingredient for success. With the Nokia 9210 Communicator and Lotus' Wireless Solutions, your office is as mobile as you are.

Nokia and Lotus work together to deliver business-critical Lotus messaging and collaboration solutions to users of the Nokia 9210 Communicator allowing access to business applications when you need it where ever you are. Nokia and Lotus are jointly focused on enabling the 78 million Lotus Notes customers in the world to take advantages of the new capabilities.

Operating on the Symbian platform, the Nokia 9210 Communicator's full keyboard, colour display and easy navigation allow for a richer and highly productive working environment. High data transmission speeds of up to 43.2 kbps further enhance the convenience of using the Nokia 9210 Communicator for business.

With Lotus Mobile Notes on the Nokia 9210 Communicator, users will be able to complete forms, participate in workflows, access sales force automation tools, or run interactive applications locally on their mobile device.

Lotus is focused on the mobile workforce

Lotus is the leading supplier of collaborative solutions to the business world. Lotus' knowledge management, workflow, document management, messaging, calendaring and scheduling and instant messaging solutions form the foundation upon which many organizations empower their workforce.

The key to the Lotus mobile strategy is that the same suite of applications,

such as messaging, calendaring, knowledge management, customer care and sales force automation can be accessed by the device which is most convenient for the user at the time. Lotus is focussed on exploiting the capabilities of non-PC devices, especially wireless devices, to the maximum.

The Domino effect

The **Mobile Notes** solution liberates the mobile worker from the need to carry a laptop every time they want to access information, check their e-mail, execute workflow or input data. It does so by allowing them to access

the Domino server directly from their wireless device, such as the Nokia 9210 Communicator.

Domino Everyplace makes the full power of Domino available to the Nokia 9210 Communicator. By combining a push solution via SMS, an access solution via WAP, and a forthcoming synchronization solution supporting SyncML, into one integrated suite, Domino Everyplace will assure that the business has the freedom to choose the most appropriate devices for its needs.

Domino Everyplace Access Server provides wireless access to corporate e-mail, calendars, directories and WAP-enabled business applications. Offering a familiar menu structure along with unified access to the Notes inbox, an easy-to-use developer tool lets you enable Domino collaborative applications for wireless access.

Domino Everyplace Enterprise Server lets organizations provide both wireless and wired sync solutions to mobile workers quickly and easily by leveraging the collaboration power of Domino. Combined with the Mobile

Notes client, Domino Everyplace Enterprise optimizes your investment in Domino by extending core business applications and infrastructure to mobile and wireless devices, such as the Nokia 9210 Communicator. It also delivers a robust application development environment for easily creating and extending business applications to the Nokia 9210 Communicator.

Domino Everyplace SMS Server allows applications to automatically send e-mail messages, alerts and notifications to mobile devices, such as the Nokia 9210 Communicator. It includes paging and notification services for sending and receiving short messages to and from SMS devices, and for receiving instant e-mail notifications or alerts from any Domino application.

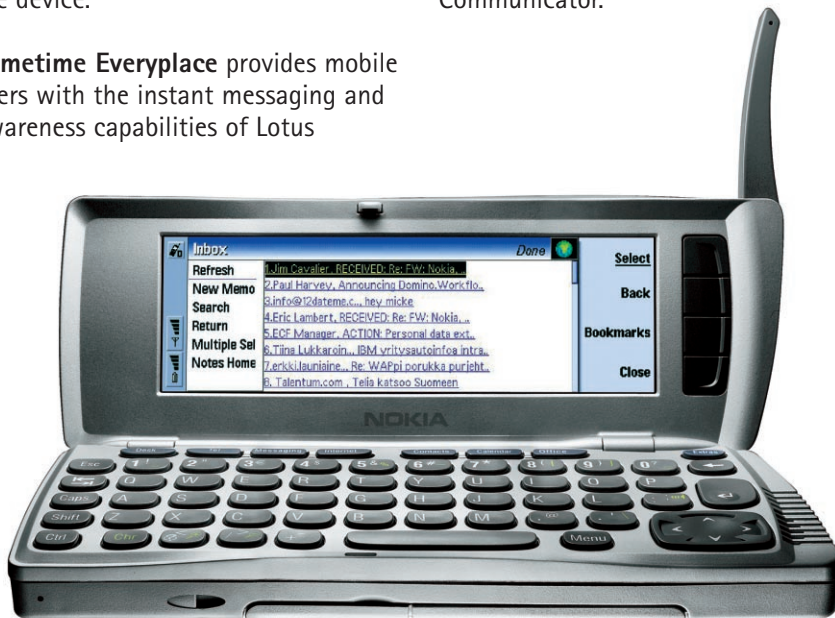

EasySync Pro Server provides simple data synchronization between handheld devices and Domino servers. It allows users to synchronize e-mail and PIM (personal information management) application data between their handheld devices and Domino servers. Users work with e-mail and PIM applications native to the device.

Sametime Everyplace provides mobile users with the instant messaging and awareness capabilities of Lotus

Sametime from WAP- and SMS-enabled mobile devices, such as the Nokia 9210 Communicator. Mobile users can see if their colleagues are online and send instant messages or initiate text chat. Desktop users can see if their mobile colleagues are online and use the best way to communicate with them whether via an instant message, phone call or e-mail.

The key benefits

By providing connectivity with your Notes desktop as well as wireless access to, and synchronization with, the Domino server, you'll see why highly mobile workers can now travel lighter, work smarter and respond easier and faster than ever before. Access to business critical applications when you need it regardless of where you are, resulting in increased productivity. Improvement in speed and ease of communication between your company and remote staff, resulting in increased responsiveness and effectiveness. No need to carry both a PDA and mobile phone anymore because you can have your office in your pocket on just one device – the Nokia 9210 Communicator.
